ValuePlus Enterprise Asset Management

An asset management solution for large scale distributed environments.

Overview

Combining the simplicity of Android devices with the familiarity of Microsoft Windows® and embracing a cloud based architecture, ValuePlus provides a truly scalable and secure enterprise asset management solution.

Multiple, user definable, depreciation methods with full financial history tracking and customisable reporting.

Complete physical tracking and auditing with condition assessment, imaging, positioning and on-the-fly additions.

Advanced capabilities include, full strategic planning support with what-if scenario forecasting, budgeting and much more.

By Design

Built for distributed, large scale environments.

Cloud capable with integrated mobile Android device interfaces and thin-client, Microsoft Windows® forms. A fully distributed, secure and centrally managed solution.

All interfaces designed to handled large scale data volumes with paging and filtering.

Multi-user at the core, allowing role segregation, task assignment and full accountability.

ERP independent allowing continuity when changing ERP systems.

Atom Software

ValuePlus Enterprise Asset Management

An asset management solution for large scale distributed environments.

ValuePlus Advantage

Enterprise class design provides peace of mind by ensuring that the software is up to the task when flexibility and scaling are critical factors for success without the need to cobble software on the fly. Regular version updates providing new capabilities while maintaining overall system compatibility.

Key Features

Multi ERP compatible.
Mobile device interfaces.
